

## Homework 9

If you are having problems with the versions of solana-cli, version 1.18.9 should work

Re install your solana command line with

```
sh -c "$(curl -sSfL https://release.solana.com/v1.18.9/install)"
```

1. Work through the CPI example : example4-cpi. You can run it with

```
npm run build  
npm run deploy:4  
npm run call:4
```

This program receives no instruction data, no accounts and it only logs a message using the `msg!` macro that can be viewed in the window running ``solana logs``

2. Work through the compute budget example : example5-compute. You can run it with

```
( npm run build )  
npm run deploy:5  
npm run call:5
```

3. Work through the PDA example : example6-pda

You can run it with

```
( npm run build )
```

```
npm run deploy:6
```

```
npm run call:6
```

4. Anchor : Create a hello world project, follow the instructions [here](#)
